pluto cartridge

The Pluto Data Cartridge has been designed to add additional data and AV connectivity to the standard Pluto power module creating an exciting new option for meeting tables where a traditional in-desk unit is not suitable.

The Data Cartridge simply bayonet fits to the Pluto base and therefore can be supplied pre-fitted to new Pluto's or for retro fitting to existing base exit modules. Just like the standard Pluto, a Pluto with the Data Cartridge fitted simply clamps into an 80mm grommet hole without the need for tools.

The Data Cartridge comes in a satin silver textured finish which contrasts well with the standard black or white Pluto domes or with our range of Pluto colours.

The Data Cartridge incorporates:
- 3 x Keystone apertures for any combination of Data, USB (data transfer), HDMI or AV.
- 1 x knock out for fitting a VGA cable
- 1 x knock out for fitting a Display Port cable
- Secure cable tie points for data and AV cables

The Data Cartridge can be ordered fully configured with data/AV cables or on its own for site installation of data/AV
FEATURES:

- Adds 5 additional data/AV sockets to Pluto
- Tool free bayonet fixing
- Retro fit to existing base exit Pluto modules
- Satin silver textured finish
